

Why Network Designs

NDI provides IT solutions to customers' unique IT problems.

NDI provides the FASTEST TURN-AROUND possible on complex IT projects—NDI SUCCEEDS 100% of the time.

NDI implements TESTED and RISK-FREE emerging technologies quickly and effectively to achieve increased productivity and revenue for our customers.

NDI principals provide management oversight to ensure superior, PERSONALIZED customer service.

NDI technical managers are SEASONED and have INSIGHT into the DoD & federal markets.

NDI technical staff not only are industry CERTIFIED, but also have a minimum of 3 years of HANDS-ON EXPERIENCE in the IT industry.

NDI is an EXPERIENCED and RELIABLE IT services provider with 7 years of excellent past performance to prove it.

Network Designs provides wireless networking, networked video surveillance, and network security in support of Force Protection Initiatives and homeland security.

A **small, women-owned** business, Network Designs holds GSA Schedules, a Department of Commerce GWAC COMMITS contract, and multiple BPAs with the Federal Aviation Administration and with NAVFAC for IT services.

NETWORK SECURITY

Assessment, Response, Forensics & Training

Network Designs on-staff law enforcement professionals are ready to secure your network data.

Data Security With Law Enforcement

Recently, information technology (IT) professionals in government and private sectors have become vigilant of internal and external threats to the security of their enterprise IT infrastructure. In response to this heightened awareness, Network Designs offers on-staff data security professionals with law enforcement backgrounds to provide enterprise network assessment, detection, investigation, and prevention.

System Assessment

Network Designs provides systems security support leading to the creation of a Security Certification and Authorization Package, the formal deliverable required by the Presidential Decision Directive (PDD)-63. We offer the following services to clients such as the Federal Aviation Administration and the Nuclear Regulatory Commission.

1. System Vulnerability & Risk Assessment
2. System Criticality Assessments
3. Asset Identification, Valuation & Annual Loss Expectancy
4. Risk Management Plan

5. Risk Remediation Schedule
6. System Remediation & Countermeasure Implementation
7. Certification & Authorization for Information Systems Security Certification
8. Contingency & Disaster Recovery Plan
9. System Security Testing & Evaluation Plan
10. System Security Plan

Incidence Response

Network Designs computer crime investigators uncover and document fraudulent computer network activity then assist in the recovery of data loss. We offer two types of responses to clients experiencing incidences of computer fraud.

Reaction Plan

We investigate and uncover computer crime and assist in recovering data, recommending alternative responses to the fraudulent incident, based on results of the investigation.

Prevention Plan

We assess and define critical assets; maximize assets; and minimize business interruption using validated forensic methods to protect, preserve, and document the fraudulent incident.

Computer Forensics

Network Designs professionals discover computer or network activity that is detrimental to business conduct. We thoroughly investigate and document fraudulent incidents and assist in the recovery of losses.

1. Assist time-critical investigations of system intrusions, allegations of misconduct, fraud, embezzlement, and loss of competitive information
2. Apply state-of-the-art technology to discover, secure, analyze, and report information from computer systems, networks, and other storage devices
3. Use validated forensic methods to mitigate and recover business losses
4. Develop system and network response plans

Investigative Training

Network Designs professionals have conducted computer crime trainings at Department of Defense, Federal Bureau of Investigations, National Infrastructure Protection Center, and Drug Enforcement Administration. We offer courses on incident response for NT / 2000 and Sun Solaris; forensic analysis; and network analysis.

Litigation

Network Designs professionals can assist clients in the process of litigation.

1. Secure relevant evidence from networks and systems
2. Serve as an expert witness
3. Supervise, observe, or conduct the review of networks and systems of opposing parties
4. Assist in "before-the-fact" review
